Moreover, the functional principle of automatic stabilizers and the impact of fiscal stabilizers on businesses are studied. The condition for a steady economic development is achievement of stability targets like full employment of production factors, monetary stability, balancing of payment as well as equilibrium of foreign trade. To counteract the economic fluctuations government can apply two stability tools: the fiscal and the monetary policy. These both policies affect the aggregate demand and contribute to stabilize short-run economic fluctuations. The principle of the fiscal policy is an adjustment of public expenditure and public revenue (taxes) in according to the economic situation. A higher public expenditure leads to an increasing of the aggregate demand. The total change in GDP is depending on two opposite macroeconomic effects: the...
