The alumina in I is the higher by 2 per cent, and as this is accompanied by 1 per cent less of magnesia, the suspicion may present itself that some of the magnesia has been thrown down with the alumina. This analysis, however, is the later of the two, and especial attention was paid at the time to this very point. Furthermore, it will be observed that the general character of I in other respects is more salic than II, as shown by the slightly higher soda and lower ferric oxide, lime, titanium, and phosphoric oxide; and these chemical differences are in harmony with the rocks themselves. The Cotognola rock (I) is very notably lighter in color, and the sections...
