Again the work of the mantle is not of such an active nature as to load the blood with nitrogenous wastes. It seems likely that the amount of nitrogenous waste in the blood that has traversed the mantle is so small that it would diminish the proportion of-nitrogenous waste in the blood, if this blood were added to the blood that passes through the kidneys. The blood that goes to the general system must in its progress lose a considerable portion of its oxygen, and (in all portions except around the alimentary canal, where there is, of course, a decided gain) food materials, and gain from...
